@Hans

Yes, i've done by typing `./configure --host=ppc-amigaos`

It worked only one time, bu sadly i uninstalled that version.

From stonecracker suggestions:

"Hmmm. Did the executables get built?"

If you `"ls -hal /usr/local/amiga/adtools/bin"`

What do you see? I'm wondering if there's any `ppc-amigaos-gcc` executable even there/built."

If i try i get:

```
amidev@AmigaOne:~$ ls -hal /usr/local/amiga/adtools/bin
ls: cannot access '/usr/local/amiga/adtools/bin': No such file or directory
```

So it seems that the executables never built.

But... if i type `ppc-amigaos-gcc -v` i get

```
Using built-in specs.COLLECT_GCC=ppc-amigaos-gcc
COLLECT_LTO_WRAPPER=/usr/local/amiga/adtools-ppc-uwin64-20170623-404/libexec/gcc/ppc-amigaos/5.4.0/lto-wrapper
