@Hans

Thank you for the info.

I will try in the next days.

Just to add some info, i had a working installation and using `-host=ppc-amigaos` worked fine. I uninstalled because the SDK 24 version `54_24` and not `54_30`. Using the option `--disable-altivec` the final configure report told me "no assembly math", while now i get `mmx`, `3dnow`, `sse`, `sse2` that looks pretty x86ish.
