As broadblues said, your configure script isn't finding the cross-compiler. Did you add the following to your ~/.bashrc:

```
export PATH=$PATH:~/adtools/bin:/usr/local/amiga/adtools/bin
```

From stonecracker's instructions:

Quote:

```
export PATH=$PATH:~/adtools/bin:/usr/local/amiga/adtools/bin
```

(You probably want to use "nano ~/.bashrc" to add that export command to the end of your bashrc file so every boot/new shell will keep the path for you.)

If you don't do that, then you'll have to update the PATH to find your cross-compiler every time you restart your machine.
