I continue to have issues with the sound card. I don't know what changed, but my installation broke and I had to reinstall OS4.1 again. The Pine Crystal sound card that I purchased was working flawlessly prior to having to reinstall. But, post installation I have to physically remove the sound card from the machine, startup with no sound card in the unit, then hard shutdown, replace the PCI sound card and when it boots up the sound works. If at any point I reboot again, sound is broken again and the process must be re-performed.

You seem to have a knack for hitting the most bizarre issues...

The most obvious thing to check would be your AHI settings. Can you check that you have the music units set as follows:

- Music Unit: Unit 0: HiFi 16 bit stereo ++
- Units 0-3: CS4281:HiFi 16 bit stereo++

This is the same sound chip as in the Sam440ep, so you can compare your settings with the instructions on [page 7 of this Sam440ep installation guide](#).

Hope that helps.

Hans
