Seems ok.

Oh come on, please try a little harder on your own behalf, can you not see this near the top?

PATH: /usr/local/sbin

PATH: /usr/local/bin

PATH: /usr/sbin

PATH: /usr/bin

PATH: /sbin

PATH: /bin

PATH: /snap/bin

That obviously doesn't include the cross compiler elements. I'm not sure why that should be though.

Perhaps you can insert an echo \$PATH near the start of the ./configure script

then do

```
>echo $PATH
```

```
>./configure
```

and see if the paths as defined by the variable change.

You'd probably want to stop the script from running till the end with a CTRL-C or something.
