I know what has triggered this - it's the switch to OpenSSL 1.1. Memory is getting trashed somewhere, or something is unaligned which wasn't before, but it's weird that it's not happening on everything.

The only link so far is that the PA6T and E5500 (ie. X1000 and X5000) have 64-bit FPUs which gives them a different code path in OpenSSL.
