OpenAL-soft for AmigaOS

URL:

I've created a repository on github for the port I'm working on of OpenAL-soft to AmigaOS (currently the 1.18.2 version).

[https://github.com/salass00/openal\\_lib](https://github.com/salass00/openal_lib)

It is working at least insofar as that it builds without errors or warnings (I'm using gcc 6.1.0 for this) and the alloopback example seems to be working (it outputs a sine wave to the speakers using AHI).

Some more testing will still have to be done before a first binary release is made.

**Edit:** The alloopback example didn't test the AHI backend, instead it outputs through SDL. The altonegen example which I just enabled building of does use the AHI backend and it uncovered a bug that is now fixed.
