@Hans

That's an old port of openal-soft that I did years ago.

The AHI backend in this is an updated version of the one I used for 1.16.0 (not released), which in turn was an updated version of the one used in the 1.7.411 port.

Because the OpenAL-soft backend API changes between releases the AHI backend code has to change too. Also I rewrote the code for dealing with the mixer process so that it sends the kill signal using the Process ID instead so it is a bit safer.

BTW if you try to use the old link to get the openal-soft sources (<http://connect.creativelabs.com/openal/default.aspx>) it doesn't work because it is now hosted in a different place with source code also on github:

<http://kcat.strangesoft.net/openal.html>

<http://github.com/kcat/openal-soft>
