You were right, MickJT-MPlayer works fine.

I thought that any other MPlayer version should work as it did beforehand and that it was an Emotion specific problem. The only thing announced was a certain YouTube issue that caused SMTube`s Emotion incompatibilities (other players not mentioned, except for MickJT-MPlayer)

So the connection and streaming is handled by the player, not SMTube, hence the https specific errors.

What about "Open audio with -> Downloadvideo.rexx" ? It won`t download an m4a file anymore. I have Download v1.5 (08/11/2017)
