A lot of your arguments have a space after the first "-" that shouldn't be there. For example, you have "- vo sdl", and "- quiet", and "- loglevel". MPlayer will be treating the "-" on its own as a special filename and redirect input from STDIN. You need to remove those erroneous spaces.

"-quiet -really-quiet -vo sdl" will work fine.

You've got a few "- " elsewhere that should be removed.

The [CLI 5] thing is because you used C:run instead of Rx, but I see you've solved that now.

Also your APPDIR paths are messed up, you have too many spaces on those lines as well.

```
PathMP = "APPDIR: Work: MickjT-Mplayer / mplayer-nonaltivec" / * Full path to MPlayer executable * /
```

```
PathFP = "APPDIR: ffplay" / * Full path to FFplay executable * /
```

That's not right, it should be:

```
PathMP = "Work:MickjT-Mplayer/mplayer-nonaltivec" / * Full path to MPlayer executable * /
```

```
PathFP = "APPDIR:ffplay" / * Full path to FFplay executable * /
```
