AFAICT ftime() returns basically the same information as gettimeofday() only the fractional seconds part is milliseconds instead of microseconds, so the following simple replacement should work:

```
int ftime(struct timeb *tbp)
{
    struct timeval tv;
    struct timezone tz;

    gettimeofday(&tv, &tz);

    tbp->time = tv.tv_sec;
    tbp->millitm = tv.tv_usec / 1000;

    tbp->timezone = tz.tz_minuteswest;
    tbp->dstflag = tz.tz_dsttime;

    return 0;
}
```
