As for that gl4es cadog's issue, something strange found : problems happens when we add debug switch to makefile. And problem is `#define dprintf`. Once it empty, like `"#define dprintf(format, args...)"` , then title pic show ups fine. But once i define it in any way (so just it be defined, and not empty), like for example `"#define dprintf(format, args...) printf("aaaa\n");` , then no title pic visibly. Wtf it can be ?)
