If you change the BOARDNAME to RadeonHD, you also need to change the CMPLength to 8. It has to match the length of the name, or rather, the length of what you want it to check of the name in order to see it as different from any other monitor icon's BOARDNAME.

This means you must also change the other icon, so the BOARDNAME there is e.g. Radeon9250 (and hence the CMPLength 10), otherwise "Radeon" and 6 would still match both.

At least this is how I remember it (can't test it myself atm).

Best regards,

Niels
