You might need to use Picasso96Mode in the prefs to set up the monitor driver. We had to do this back in the day when setting up a new video card.

There's a guide to P96Mode here.

Best to check first if the board appears in the "attach setting to" menu alongside whatever the 9250 identifies itself as. My R9 280 shows up as "Board0: Radeon HD 7900 Series".

I don't think it's problem sharing monitor files since there are many old ones on Aminet. PM me your email and I'll send a selection of the monitor driver files I have here.

If you still get any results it might be worth getting in direct touch with Hans.
