Hi, thanks for your suggestions, this helps me to better understand the functioning of UAE.

Do you have a configuration file for The Killing Ground 3D II?

At the moment it is the only game that seems to be very slow.

I understand that for any Amiga machine it has always been the game that required a lot of resources.

By activating the JIT option in UAE-X1000 the LED is operating during the game, so the JIT is activated.

Thanks again you have been very kind.

Mine is just passion for this wonderful machine.
