I just did a run of tests and no, it doesn't "always" stop at 673 in the log, i get a 50% chance that it prints
Quote:

```
[OS4_CloseSystemWindow] Closing window 'ScummVM...'
```

but i **never** get the normally following line

Quote:

```
[OS4_CloseScreen] Close screen
```

so my guess is that it bombs there (CloseScreen, i mean)..maybe the former fullscreen is still there but sdl2 can't close it or it is already disposed of and sdl2 "still" tries to close it?

btw: The windows **IS** erased on WB, it freezes after the window is gone.
