Hi,

I did a little E-UAE tutorial to use it with winUAE it works perfectly

Thanks again for all the suggestions and advice received.

The only problem is that if the installer is used, the program hangs during installation.

So to avoid the problem I performed a manual installation that works.

I wanted to ask if it was possible, give this package for those who use winUAE so you can use it since it works very well.

From the package I will remove the kick.rom etc.

Thanks again for a possible answer.

here the video if it can be useful:
