Found the problems with new SDL version: when i set fullscreen and set `gfx_vsync=true` , then new SDL version going to black screen. Old one works with that setting on.

Once i comment it out, all starts in fullscreen mode fine. It can be and my configs somehow hardcore, or some regression in sdl or in eaue in that terms, dunno. But same config works with `gfx_vsync=true` and old version of eaue. I may try for sake of tests build that jit eaue against very latest SDL1 code, not with that one from os4depot, there was lots of cleanup and fixes, maybe it will make sense..

With amygfx version the same 1:1 config doesn't runs in fullscreen mode, probabaly need some config adaptations dunno.
