@samo79

I know about his repo, and can see that latest commit done about 1.5 year ago, about "Add support for hardfiles >2GB on AmigaOS 4.x.". Dunno if it works at all. There is just redefine of open to open64 and lseek to lseek64, if it enough for make it works, then i can rebuild it with it.

And there is nothing to merge anyway, i just compile what was done by others, just with recent libs/gcc/etc.

Through i add hour ago a little feature i was always want in : ability to switch by damn alt+enter to/from window/fullscreen , that ctrl+alt+s annoy me all the years :)

@salas00

Is that "Add support for hardfiles >2GB on AmigaOS 4.x." commit make it works ?
