Btw, latest SDL2 also can't be compiled over last public SDK53.30 it has same undefs to MAX_DOS_PATH and to MAX_DOS_FILENAME in the SDL_os4video.c.

Also SDL_os4opengles.c need to be changed a bit, as seems your includes for ogles2.library is outdated: with latest public one, Daniel change aglCreateContextTags() to aglCreateContextTags2() for newly compiled code (see "2" at end).
