Hi AlicePPC,

thank you for your suggestion,

smtube and yt.rexx works well.

Too bad for odyssey, it would be nice to have a new version optimized for watching videos, with winuae it would be excellent.

At the moment an X5000 really has a very high price.

I understand the niche and market talk, but with lower prices those who used Amiga many years ago 'would certainly buy an OS as an amiga, I really like it, at the time I always used amiga as a system not as a gaming machine.
