Thank you for your suggestion,

YT.rexx works very well with all Odyssey NetSurf browser applications etc.

Probably it is a problem of resources allocated wrongly by winuae is still a "beta" for amigaos 4.1, with SMTube

I saw that only the first time the download of the video works on the second attempt of the download the program does not seem to work anymore.

I thought it was my mistake of configuration, probably the problem is to be found in winuae.

Thank you for your patience and suggestions.

Although I use winuae I really like using the 4.1 purchased from hyperion.
