@AlicePPC

Thanks for the advice I appreciate them a lot

Unfortunately with winuae some things change

with the configuration of the smtube.ini file

if I do not insert -vo sdl -ao sdl

SMTube does not work the video does not start

even adding the lines you recommend the video does not start.

Personally, whenever I ask for advice, I realize I use winuae, and I always try to test the guides and suggestions

so I can adapt them to winuae.

I do a lot of testing to use 4.1, I have achieved excellent results

so every time I get help, I really appreciate it.

I always ask here on the forum, because I consider this site a point of reference for 4.1

here is a little video with the results obtained with winuae using 4.1, the video is old to today I added a lot more.

Thanks again to the whole forum.
