URL:

I tried to install the new Amicygnix version  
I unarchived AmiCygrix as is  
in  
datas; AmiCygrix-Base  
i had one file corrupted ../gnutks-cli-debug

I added an assign cygnix: to it which was called during the inbinstall of AmiCygrix-tools  
During the install i was asked for the gcc: assign which i don't seem to have  
I assigned it to ram;

The install continued with ni further complaints, but comparing it with an older AmiCygrix install a lot of files and  
drawers are missing and i can't see the starticons i used to have

What can i do?
