QTWeb works, some questions

Author: : white

@zzd10h

I tried QTWeb 2013 version made by you, it is much faster than the version included in qt.minimal

I was wondering if it was possible to include something to watch videos on youtube etc., or the version is closed for this "plugin"

"I guess it's a closed project now"

Personally I do not have very clear ideas on this browser. I always try to try the alternatives

Sorry for my questions

Here a little video:

Thanks for any suggestions or answers.
