Hi

I have radeon RX GPU in my X5000, it is working well but older games that needs MiniGL (AvP, Quake etc) are not working here so I'm thinking to buy another R5 230 Radeon GPU. Is it compatible with MiniGL? Or would you recommend some other one?

Does it need any additional drivers to buy from A-Eon?

I have Enhancer + and upgrade to 2.0 bought already

Can I have both gpus connected in MB and switch between them after reboot and by reconnecting monitor?

Is it worth buying it at all?

Thanks
