An alternative fix for missing std::to_string and std::wstring.

```
#ifdef __amigaos4__
namespace std {
    template <typename T> string to_string(const T &n) {
        ostringstream strm;
        strm << n;
        return strm.str();
    }

    typedef basic_string<wchar_t> wstring;
}
#endif
```
