Next issue...i tried to build (after a year long hiatus) ScummVM with SDL1 (for test cases), but i get a linker error

LINK scummvm

backends/platform/sdl/sdl.o: In function `OSystem_SDL::setupGraphicsModes()':

backends/platform/sdl/sdl.cpp:721: undefined reference to `SdlAudioCDManager::SdlAudioCDManager()'

gmake: *** [scummvm] Error 1

which is strange, because everything else is picked up correctly and i have the latest SD1 installed
