Yeah current SDL1 already much better than old 1.2.13 and can be released as it already. Its not only bugs fixed by original authors, but also many amigaos4 bugs was fixed since as well (by you lately, but also in previous years by others) , also those new features (iconify, compositing, etc), code now cleaner and so on. Huge task, worth of release :)

Maybe only need to be released also as SDL2 with plain and debug libraries, so all will be same for both SDLs, as well as probabaly need to be merged with latest changes from main authors too (there was some fixes lately (like 10 days ago some buffer overflow fixed in SDL_pixel.c in both SDL2 and SDL1))
