haha ! "sometime it crash" :)

LOL 🤔

I meant: yes sometimes i got DSI when i try to watch a youtube video, BUT ACTUALLY my MAIN problem is the usability ! ... for now that HTML5 video are really too slow to be usable, so when i need i use something else --> SMTube

That's why i was not so specific ... of course if you need i can send you some crashlogs aswell (as far as i have) but i don't consider that sporadic crash as a priority

, and i do not have sources of the players they use on morphos which they wrote specially for, and which was written not by Fab, and it wasn't shared.

Mmm so what is the player we are using now ?

I though it was the one developed by Fab

But you can be sure that i will not worry about writing new overlay code for old cards. Even and if i ever will do anything there, is adding radeonhd/warp3dnova support, but not spending limited time and motivation for supporting old gfx cards.

Yeah, i can understand this ... however that means 40% and more of OS4 users out 😞

Aniway, for now let's forget these video problems .. if you agree let's testing atleast these radio streaming crap ..
