The page says:

Quote:

Muses Radio Player - The HTML5 MP3/OGG/AAC Live Stream Player!

<https://www.muses.org/?>

Now the HTML5 version of Muses is the default option, and fallbacks to Flash if needed. It also adds more translations and implement many of the Flash version

And looked at the source to me it seems an HTML5 player

Quote:

Need just normal page, with usuall html5 player (youtube ?) , which will show that once i play video, everything crashes

No need imho and it will be even confusing because:

1 . You don't know if is the video to crash or if is it something else involved ..

I mean usually HTML5 video in youtube crashed (when they crash) after 1 or 2 minutes of playing, maybe a bit more but more or less this is the range of the time ... so it can't be the same problem of the radio ... with the radio i can stream a audio for 15 minutes, 30 minutes and even more time without any problem.. until they crash because memory ends ... with video involved instead you don't know what happened, sure maybe still also similar memory problem with videp, but i believe video crashed also for other reasons

2 . Even because the problem seems the memory drainage, eventually it crashed after a while (when the memory finished) and not instantanely

3 . To do a test using Youtube i will need to found a "video" that only contains an audio source, but not a video .. but in Youtube everything in reality is a video !

BTW: another HTML5 radio here: <https://www.newradio.it/player-html5/>
