Nice, thank you

I do hve a question...if i open the "tests" directory (i have unpacked it in ram: i get a AmigaDOS requester telling me to

Please instert volume

Hibernated:

in any drive

Process: 89 "Workbench"

I didn't know that simple files could trigger AmigaDOS meessages...

EDIT: Nevermind, i had an .adf mounted earlier and it seems the system was still looking for it, although it was already unmounted from Diskimage.device
