I didn't know you could overclock the SE, pretty cool!

Quake 3 suddenly crashing unfortunately seems to normal,  
I've tried numerous source ports and all would randomly crash on my stock 800mhz 7451 and it still crashes on my 1066mhz 7457,  
with a lovely continuous buzz sound coming out of the speakers :)

Btw, the smoke trail of the rocket launcher really kills performance on my 9250,  
I recommend to go to the console and type

```
cg_noProjectileTrail 0
```

to disable it, makes it so much faster and clearer too!

```
r_ext_compressed_textures 1
```

Also gains some FPS, but the textures will look very low res.

[Here's a list of all Q3 console commands](#)
