@samo79

I now assume the lib is the most stable MGL version ever and that samo79's issue is nothing new or unrelated 🤔

@Capehill

Yes, right, you just found another package of MGL bugs (almost exactly 14 years old bugs) 😊

And I just fixed it. Not yet committed, but the lib on my homepage has been updated accordingly, please check it out.

However, please, report bugs in the usual way. This whole story here is about making sure that the upcoming 2.23 with its current feature list can safely replace any former lib.

Let's bring this to an end for now. I at least don't want to spend more time with this right now, I got my own projects to care for 😊
