Haha :) Not big deal to touch readme anyway , maybe later someday :)

@Daniel

Yeah, all looks fine, and like you use that mkrelease script , which have only one problem : icons didn't sorted visually correctly (expectually those ones in the Demos). If you doesn't mind, i can sort it all (so visually when any user will unpack it, all will fits nicely in wb windowes, etc).

But if not want to bother anymore, then yeah, that mgl.zip exactly like one we have on os4depot, just much better :)
