For me always crashes on 3st scene, crash skippable, but crashes and over 2.20 and over 2.23. I download yesterday original sources (not ones from os4depot archive), but loose interest to compile it as it have no music :) but maybe still worth to report over last gcc to see how it will be.

Version on os4 depot use glut version + some changes in code and data which can be also issues.

On original site there is and glut original version and sdl one:

Glut one: <http://www.glexcess.com/files/glxsglut.rar>

Sdl one:

<http://www.glexcess.com/files/glexcess.tar.gz>
