URL:

@Daniel, BSzili & all

There is ready archive for os4depot:

<http://kas1e.mikendezign.com/aos4/minigl/minigl.lha>

That is just last Daniel's tmp/mgl.zip, in which i only do:

- 1). update data files by correct ones as we discuss lately
- 2). snapshot place of wb windowes and files in, so when one open "demos" directory in WB, he have no mess as before.
- 3). packed as usuall .lha instead of zip

Plz check if all is ok, and so i will upload that one on os4depot to replace old 2.20 one
