Ha, good catch ! My def_txt is set to use .txt files with multiviewer, so when i snapshot them it added like this, will fix.

Through that damn lightsaber issue , i really can't reproduce it. I tried to lower all settings, to raise all setting, middle one, enable/disable lights, glows, shadows , etc,etc : no bug..

@ddni

Do you have by some luck maybe some environemnts for minigl sets ?
