So both of you on x1000, which in compare with x5000 have dma enabled in graphics.library and altivec. As far as i see, minigl have altivec based flags/code, maybe related somehow.. But firstly we need your configs so i can test on my.

@amig\_os

Can you upload your openjk.cfg too ? It placed in .openjk/base directory

@ddni

Minigl have some settings controled via environments, and they placed in env:minigl/ if i remember right
