A video of that issue would be good to see because right now I'm only *guessing* that it's z-fighting, seeing it in motion would help to (in)validate that.

@kas1e

Back online, thanks for posting and building 😊

Let's see what those guys with that problem say to the -o2 build. On the other hand, when reading Petrol's post:

@petrol

The prebuild version from last year was compiled with the same compiler and the same compiler flags. If I look at the svn then the only thing that could maybe have the theoretical power to have such an impact is the new dxt lib (stuff like the extension-string bug aside, I'd say we caught all those new issues in the meantime), but IIRC we already ruled that out. What HW do you have? And please check the bugzilla for your other issues.
