Ok so this is again a wrong thread, but Daniel, do you copy?

Yes... 😊 I will look into it!

But yeah, this (off)thread-mess is pretty annoying. The MiniGL-thread already turned into a ResidualVM-bug-thread, the others are a wild mix too.

Sure, the stuff sometimes overlaps but to be honest, looking at e.g. the sheer amount of mixed stuff in e.g. the GL4ES thread I certainly overread a huge amount of maybe interesting info.

Maybe we need a "mixed 3d issues" thread where people who are unsure where it belongs can put there stuff first, dunno.
