Do you remember that it worked earlier? My memory is fuzzy here.

Does last SDL2 version mean the latest OS4Depot version or the latest 2.0.9 RC?

2.0.8 non-debug version has a bug which prevents AmigaInput joysticks being enumerated by SDL. So, if you are using the OS4Depot version, 1) try with the latest RC version from github, or 2) rename the debug version of shared object and try again with that.

At some point OS4Depot 2.0.8 version will be replaced with 2.0.9 release, I hope.
