Keep up the great work Fredrik! Looking forward to your work on the SSH client. Sent some paper thanks.

I was wondering about the terminal emulation aspect of your client... Are doing your own implementation of ANSI, VT codes or how is that going to work?

I've been using the console with SSH on a shell account for years, but it's always been a challenge. Hard to set up. Hard to get the server talking with the Amiga. Hard to keep working (apps no longer seem to pay attention to TermCap, etc., like Alpine).

Very curious to hear what your plans are and how things are going!

THANKS again,

PJS
