Added aos4 specific mouse-wheel support as well as found 4 general bugs which happens on all platforms. One i fix as it was easy enough, and another 3 still there , so probably once they gone i can make os4 release of that 8.1 , and then upload os4 changes to main vim-mui repo, so Ola can merge it and all other releases can be done together at the same time.

I also wrote to Mason with asking about new toolbar and main icons, so maybe there will be something too if he will in interest
