amistore is a-eon product, hyperion don't have access maybe, easier to upload on their own servers.

anyone can put something up on amistore an sell it. its not just a-eon who seels there products in there, its for all 3 party'es too..

and i think hyperion should suport it.. iff wee had amistore back in 1998 wee would still have most of the developers who was still on the amiga scene after commedore died. developers who made softwere for amiga 2/3/4000 and other expanded amigas such like amiga 1200 with harddisk and acceleration cards ( cpu & ram ) updated..

maby wee would have got napalm 2 (EUROBURN), candy factory 2 and others..
