To run your command, did you use `run >nil: mycommand.exe` ?

As i say its IconX which is problem. Its output empty shell window when i use it from workbench. Using `"run >nil: C:IconX"` in the default tool tab not works, saying "please insert volume run >NIL:". Putting the same line to the `".."` also didn't help and give the same error.

@All

I do check IconX doc, and find that it have tooltype `WINDOW`, so i can specify window, name, size, etc. But something like `WINDOW=CON:0/0/0/0/` didn't work sadly.
