URL:

@Hans

Could very well be it, as i'm using a script to relay URLs and open the browser.

```
/*
$VER: OdysseyURL.rx 1.41 (08.03.2017) © Raziell
Tested with YAM, WookieChat, Multiview and Odyssey.
Works with links and html files.
*/
```

```
PARSE ARG URL
```

```
/*
Get rid of any quotes around the URL, we add the quotes again when we send the
URL to the browser to cure Odyssey not being able to work with spaces in links.
Reason for that is that double or triple quotes could have been read in
(possibly sent from other programs) and we maybe also need to add the http://
or file:/// statement, which would in turn break the URL/path string, i.e.
http://"This-is-the-url" or file:/// "This-is-the-path"
*/
```

```
URL=COMPRESS(URL,"")
```

```
/*
Check for and, if needed, add the missing http:// statement in front of the
link, otherwise Odyssey (and probably other browsers) won't load the page and
check for YAM's method of displaying html documents as temporary files in
RAM:T and add the needed file:/// statement in front of the path, otherwise
Odyssey (and probably other browsers) won't load the page from RAM/Disk.
*/
```

```
IF POS("http",URL) = 0 THEN DO
  IF POS("RAM",URL) > 0 THEN
    URL="file:///URL"
  ELSE
    URL="http://URL"
```

END

/\*

Check for Odyssey running, if it is, just open the site/file on a new tab.

\*/

IF POS("ODYSSEY", SHOW(PORTS)) > 0 THEN DO

ADDRESS ODYSSEY.1

SHOW

OPEN NEWPAGE NAME ""URL""

EXIT 0

END

/\*

If it's not running, start Odyssey and then open the site.

\*/

ADDRESS COMMAND "WBRun APPDIR:ODYSSEY"

DO FOREVER

IF POS("ODYSSEY", SHOW(PORTS)) > 0 THEN DO

ADDRESS ODYSSEY.1

SHOW

ADDRESS COMMAND "Wait 2"

OPEN NAME ""URL""

EXIT 0

END

END
