@Raziel

I use this rexx script in URL Prefs (not sure if it fails when URL have/uses quotes):

```
if show('PORTS','ODYSSEY.1') then do
```

```
  address ODYSSEY.1
```

```
  OPEN NAME url NEWPAGE
```

```
end
```

```
else do
```

```
  address command 'APPDIR:Odyssey' url
```

```
end
```

URL Prefs:

ClientName="OWB" ClientPath="REXX:odyssey.rexx" CMDFORMAT="\*" <http://%s> \*"
