@Hans

wrt to the gfx card question:

Thank you...two more questions, sorry

1) Where can i find this particular xDock docky?

Does it come with XDock or is it available from OS4Depot?

and

2) How does the gfx driver handle the available "Card Mem" (to stay with the docky description). Do programs also have to add special code to make use of it or is it handled by the gfx driver internally?
