Fast.com's upload speed is clearly wrong, so it's likely that some issue is ruining the results. It could be something simple like Odyssey's lack of HTTP/2 support, or the page's javascript. A few years ago I used an online speed test whose javascript was so heavy that it killed the transfer rates.

No idea which speed test will give you the most accurate results. I thought I used to use speedtest.net, but that's currently crashing Odyssey on my machine (Tabor).

Hans

I can confirm that using speedtest websites on amiga mostly does not give reliable results. I was suspecting javascript too. I do have the X1000 connected to a 500Mbps line with 25Mps upload but it measures only around 54Mbps. In contrast when transferring to another computer on the intranet I measured approx 64Mbps.
